                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 48177, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster
FILE REFERENCE: File Reference: 7326-094
CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SOFTWARE: Patentin Ver. 2.0

Patent No. 6583275
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Lynn A Doucette-Stamm and David Bush
APPLICANT: Lynn A Doucette-Stamm and David Bush
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO
TITLE OF INVENTION: ENTEROCOCCUS FAECIUM FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ..

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 6, Application US/09529157

Patent No. 6500939

GENERAL INPORMATION:
APPLICANT: Kato, Seishi
APPLICANT: Sekine, Shingo
TITLE OF INVENTION: CDNAs Coding For Human Proteins Having Transmembrane
TITLE OF INVENTION: Domains
TITLE OF INVENTION: Domains
FILE REFERENCE: GIN-6711CPUS
CURRENT FILING DATE: 1998-10-02
PRIOR FILING DATE: 1998-10-02
PRIOR APPLICATION NUMBER: PCT/JD98/04447
PRIOR FILING DATE: 1998-10-02
PRIOR APPLICATION NUMBER: JP97-10-08
NUMBER OF SEQ ID NOS: 8
SOFTWARE: PATENTIN USY: 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                 ö
                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO
TITLE OF INVENTION: ENTEROCOCCUS FAECALIS FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 032796-032
CURRENT APPLICATION NUMBER: US/09/134,000C
CURRENT FILING DATE: 1999-08-13
PRIOR APPLICATION NUMBER: US 60/055,778
PRIOR FILING DATE: 1997-08-15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

Sequence 4672, Application US/09543681A

Patent No. 6605709

GENERAL INFORMATION:
APPLICANT: GARY BREFOR

TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS

FILE REFERENCE: 2709.1002-001

CURRENT FILING DATE: 2000-04-05

PRIOR APPLICATION NUMBER: US 60/128,706

PRIOR APPLICATION NUMBER: US 60/128,706

PRIOR FILING DATE: 1999-04-09

NUMBER OF SEQ ID NOS: 8344

SEQ ID NO 4672

LENGTH: 296

                                                                                                                            g
                                                                                                       ઠ
                                                                                                               This_sequence represents a fragment of the amyloid beta peptide. The invention relates to the use of peptide compounds for inhibition of polymerisation of amyloid beta peptide (ABP), as model substances for polymerisation of ABP, as model substances for synthesis of ABP-ligands for inhibition of polymerisation of ABP, as a tool for the identification of other organic compounds with similar tool for the identification of other organic compounds with similar functional properties, or as ligands in positron emission tomography. The peptides may be used in treatment of amyloidosis, specially in treatment or prevention of demens in patients with Down's syndrome, for treatment or prevention of hereditary cerebral haemorrhage with amyloidosis (Butch type) or for the prevention of fibril formation of human amyloid protein. They can also be used for identifying other molecules with similar propertier and/or as ligands for detection of amyloid deposits using e.g. postfire missian tomography. The peptides of AAB48474-B48496 cause the breakdown of amyloid deposits and are therefore useful for treating amyloidosis disorders such as Alzheimer's disease. Peptides AAB48474-B48496 were identified from the glycosaminoglycan binding region and the prot-prot interaction region of the human amyloid
                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Antifibrillogenic agent useful for inhibiting amyloidosis and/or for cytoprotection for treating amyloidosis disorders, comprises a peptide, its isomer or peptidomimetic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 EXXEXEXEX
                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                 Peptides AAB48474-B48496 are antifibrillogenic agents that can be used for inhibiting amyloidosis and/or for cytoprotection. The peptides of AAB48474-B48496 cause the breakdown of amyloid deposits and are therefore useful for treating amyloidosis disorders such as Alzheimer's disease. Peptides AAB48474-B48496 were identified from the glycosaminoglycan binding region and the prot-prot interaction region of the human amyloid
                                                                                                                                                                                                                                                                          Antifibrillogenic agent useful for inhibiting amyloidosis and/or for cytoprotection for treating amyloidosis disorders, comprises a peptide, its isomer or peptidomimetic.
                                                                                Nootropic; neuroprotective; antifibrillogenic; amyloidosis inhibition; cytoprotection; amyloid deposit degradation; amyloidosis disorder; Alzheimer's disease.

The present sequence is that of an all-D peptide suitable for use in preparing vaccines for preventing or treating Alzheimer's disease and chera peptide (see AABS262), and may be modified by removing or amyloid related disorders in humans. It is based on a portion of amyloid-beta peptide (see AABS262), and may be modified by removing or inserting 1 or more amino acid residues or non-amino acid fragments. Vaccines of the invention are produced using in on-self. It ragments and the other amino acid residues or non-amino acid to peptides synthesised from the unnatural D-configuration amino acids to saying the drawbacks of self, proteins. The all-D peptides non-self. Cayoride the drawbacks of self, proteins. The all-D peptides need not be agregated to be operative or immunogenic. They preferably interact with at least 1 region of an amyloid protein, e.g. the beta-sheet region or Cayoriding site region, the amyloid-beta peptide, or their immunogenic fragments, protein conjugates, immunogenic derivative peptides and immunogenic peptidomimetics. Examples include all-D peptides and corresponding to residues 1-42, 1-40, 1-35, 1-28, 1-7, 10-16, 16-21 and 36-42 of the amyloid-beta peptide and the all-D peptides and corresponding to residues 1-42, 1-40, 1-35, 1-28, 1-7, 10-16, 16-21 and 36-42 of the amyloid-beta peptide and the all-D derivative peptides given in AAB82623-64. The vaccine elicits a preferential TH-2 or TH-1 response, crevently fibrillogenesis and associated cellular toxicity. The amyloid related diseases may be localised amyloidosis, e.g. diabetes type II, charted diseases, example, cerebral amyloid angiopathy, and prion protein related diseases, or systemic amyloidosis associated with charmation arthritis), famillal Mediterranean fever (FMF) and systemic chromic infection derivative perivative mineral perivative perivative mineral perivati
                                                                                                                                                                                               Preventing/treating amyloid-related disease, especially Alzheimer's disease, comprises administering antigenic all-D peptide, eg. as vaccine, which elicits production of antibodies to prevent fibrillogenesis and associated cellular toxicity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

Amyloid targeting peptide #5.

```
The present sequence is that of an all-D peptide suitable for use for preparing vaccines for preventing or treating Alzheimer's disease and other amyloid related disorders in humans. It is based on a portion of amyloid-beta peptide (see AAB82622), and may be modified by removing or inserting 1 or more amino acid residues, or by substituting 1 or more nation acid residues or non-amino acid fragments. Vaccines of the invention are produced using 'non-self' peptides synthesised from the unnatural D-configuration amino acids to avoid the drawbacks of 'self' proteins. The all-D peptides need not be aggregated to be operative or immunogenic. They preferably interact with at least 1 region of an amyloid-beta peptide, or their immunogenic at least 1 region of an amyloid-beta peptide all-D peptides and immunogenic peptidemimetics. Examples include all-D peptides and immunogenic peptidemimetics. Examples include all-D peptides and corresponding to residues 1-42, 1-40, 1-15, 1-28, 1-7, 10-16, 16-21 and corresponding to residues 1-42, 1-40, 1-15, 1-28, 1-7, 10-16, 16-21 and corresponding to residues and associated cellular toxicity. The amyloid of preventing fibrillogenesis and associated cellular toxicity. The amyloid corresponding fibrillogenesis and associated cellular toxicity. The amyloid corrected diseases, scrapie, cerebral amyloid-besses may be localised amyloidosis, e.g. diabetes type II, cheutzfeldt-Jakob diseases, scrapie, cerebral amyloid-angiopathy, and crent protein related disorders, or systemic emcephalitis, cheuric infection (e.g. tuberculosis) or chronic inflammation (e.g. tuberculosis) externed fever (FWF) and systemic myloidosis found in long-term haemodialysis patients
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Preventing/treating amyloid-related disease, especially Alzheimer's disease, comprises administering antigenic all-D peptide, eg. as vaccine, which elicits production of antibodies to prevent fibrillogenesis and associated cellular toxicity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

The invention relates to an amyloid-targeting imaging agent comprising an amyloid targeting moiety, a linker moiety and a labelling moiety. The agent is of general formula A.t. (A.l.n.k. z.A.l.a.b. [1] where z = 0 - 1; C.A.t. = an amyloid targeting mojety. A.l.n.k = a linker moiety; and A.l.a.b. [2] a labelling moiety. Also included are limaging amyloid deposition or diagnosing an amyloid-related condition in a patient involving administering (1) to the patient, and ultrasound imaging (1) in the condition to determine the presence of amyloid or amyloid-related condition; and a kit for preparation and ultrasound imaging (1) in the condition agent, a buffering agent, a transchelating agent, and instructions for the preparation and use of the radiopharmaceutical in the imaging of amyloid deposition and for diagnosing an amyloid condition e.g. Creutzfeldt-Jakob disease (CDD), kuru, transmissible condition e.g. Creutzfeldt-Jakob disease (CDD), kuru, transmissible cerebral amyloidosis, feline sponsiform encephalopathy, non-transmissible cerebral amyloidosis, feline sponsiform encephalopathy, non-transmissible cerebral amyloidosis, light chain-related amyloidosis, light chain-related amyloidosis, cerebral amyloidosis, light chain-related amyloidosis, cerebral amyloidosis, light chain-related amyloidosis, cerebral amyloidosis, light chain-related amyloidosis, carebral amyloidosis, light chain-related amyloidosis, percent acquence is a peptide forming the amyloid targeting moiety of the amyloid plagues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New amyloid-targeting imaging agents useful for in vivo imaging amyloid plaques and/or for the treatment of amyloidosis disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                          Amyloid; imaging agent; Creutzfeldt-Jakob disease; Kuru; CJD; transmissible cerebral amyloidosis; transmissible virus dementia; scrapie; transmissible mink encephalopathy; BSB; type II diabetes; bovine spongiform encephalopathy; inflammation associated amyloid primary amyloidosis; feline spongiform encephalopathy; Alzheimer. disease; prion-mediated disease; blood-brain barrier; dialysis-related amyloidosis; light chain-related amyloidosis; cerebral amyloid angiopathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

us-10-009-122-6.rag

Sequence 4 AA;

```
The invention relates to an amyloid-targeting imaging agent comprising an amyloid targeting moiety, a linker moiety and a labelling moiety. The cagent is of general formula A.t. (A. 1...k) 2.A. 1.a.b (1) where z = 0 - 1;

A t = an amyloid targeting moiety. Also included are imaging amyloid deposition or diagnosing an amyloid-related condition in a patient involving administering (1) to the patient, and ultrasound imaging (1) in the patient to determine the presence of amyloid or amyloid-related condition is and a kit for preparation are administering agent, a buffering agent, a transchelating agent, and cinetractions for the preparation and use of the radiopharmaceutical in the imaging amyloid or an amyloid-related condition. The agents are used for imaging amyloid deposition and for diagnosing an amyloid deposition and for diagnosing an amyloid deposition or used for imaging amyloid deposition and for diagnosing an amyloid deposition or cerebral amyloidoses (transmissible virus dementias), familial CJD, cerebral amyloidosis, feline spongiform encephalopathy, non-transmissible cerebral amyloidosis, feline spongiform encephalopathy, non-transmissible cerebral amyloidosis, light chain-related amyloidosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 present sequence is a peptide forming the amyloid targeting molety of the agent of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New amyloid-targeting imaging agents useful for in vivo imaging amyloid plagues and/or for the treatment of amyloidosis disorders.
                                                                                                                                                                                                                                                 Amyloid; imaging agent, Creutzfeldt-Jakob disease; Kuru; CJD; tranamissible cerebral amyloidosis; tranamissible virus dementia; scrapie; transmissible mink encephalopathy; BSE; type II diabetes; bovine spongiform encephalopathy; inflammation associated amyloid; primary amyloidosis; feline spongiform encephalopathy; distantation disease; brion-mediated disease; blood-brain barrier; disasserielated amyloidosis; light chain-related amyloidosis; cerebral amyloid angiopathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1. .4

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to a new method of inhibiting cerebral amyloid angiopathy. The new method of the invention involves contacting a blood vessel wall cell with an amyloid-beta40 inhibitor. The invention can be used for treating disease states characterised by cerebral amyloid haemorrhage with amyloidosis of the Dutch type and haemorrhagic stroke. The present sequence represents one of a group of peptides (AAU11648-AAU11669, AAU11910 & AAU11911) that were used in the invention as a carrier for the amyloid-beta40 (Abeta40) inhibitor. The Abeta40 inhibitor cerebral amyloid angiopathy (CAA)
                                                                                                                                                                                                                                                                      Amyloid-beta40 inhibitor; Abeta40 inhibitor; cerebral amyloid angiopathy; CAA; nootropic; neuroprotective; cerebroprotective; Alzheimer's disease; cerebral haemorrhage; amyloidosis; haemorrhagic stroke.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Inhibiting cerebral amyloid angiopathy used for treating e.g. Alzheimer's disease comprises contacting blood vessel wall cell with amyloid-beta 40
                                                                                                                                                                                                                                            Peptide #14, used as carrier for the amyloid-beta40 (Abeta40) inhibitor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a new method of inhibiting cerebral amyloid angiopathy. The new method of the invention involves contacting a blood vessel wall cell with an amyloid-beta40 inhibitor. The invention can be used for treating disease states characterised by cerebral amyloid angiopathy, particularly Alzheimer's disease, heraditary cerebral amyloid memorrhage with amyloidosis of the Dutch type and haemorrhagic stroke. The present sequence represents one of a group of peptides (AAU11648-AAU11669, AAU11910 & AAU11911) that were used in the invention as a carrier for the amyloid-beta40 (Abeta40) inhibitor. The Abeta40 inhibitor was used in the invention to treat a disease state characterised by cerebral amyloid anglopathy (CAA)
                                                                                                                       Amyloid-beta40 inhibitor; Abeta40 inhibitor; cerebral amyloid angiopathy; CAA; nootropic; neuroprotective; cerebroprotective; Alzheimer's disease; cerebral haemorrhage; amyloidosis; haemorrhagic stroke.
                                                                                                 Peptide #6, used as a carrier for the amyloid-beta40 (Abeta40) inhibitor.
                                                                                                                                                                                                                                                                                                                                                   Inhibiting cerebral amyloid angiopathy used for treating e.g. Alzheimer's disease comprises contacting blood vessel wall cell with amyloid-beta 40 inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             All-D-amyloid beta peptide, Alzheimer's disease; rheumatoid arthritis, cerebral amyloid angiopathy; amyloid disease; ankylosing spondylitis; psoriasis; Reiter's syndrome; Adult Still's disease; Bechet's syndrome;

The invention relates to a method for prevention and/or treatment of an anyloid-related disease which comprises administration of an all-D-amyloid-beta peptide. The method is used for preventing and/or treating carryloid-beta and other amyloid related disease e.g. cerebral amyloid angiopathy; for altering serum levels of amyloid-beta in a mammal and caround anyloid-beta or fibril amyloid-beta from the mammal; and reducing or inhibiting the formation of plaques. It is the mammal; and reducing or inhibiting the formation of plaques. It is also used for treating AA (reactive) amyloid diseases including cathritis, ankylosing spondylitis, psoriasis, psoriatic arthropathy, arthritis, ankylosing spondylitis, psoriasis, psoriatic arthropathy, cathritis, ankylosing spondylitis, psoriasis, bronchiectasis, decubitus infections (preferably leprosy, tuberculosis, bronchiectasis, decubitus infections (preferably leprosy, tuberculosis, bronchiectasis, disease).

Certain malignant neoplasms can also result in AA fibril amyloid deposits cincluding Hodgkin's lymphoma, renal carcinomas of gut, lung and urogenital tract, basal cell carcinoma and hairy cell leukaemia. The including sequence is an Abeta peptide used to illustrate the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     All-D-amyloid-beta peptide; Alzheimer's disease; rheumatoid arthritis; cerebral amyloid angiopathy; amyloid disease; ankylosing spondylitis;

The invention relates to a method for prevention and/or treatment of an amyloid-related disease which comprises administration of an all-D amyloid-beta peptide. The method is used for preventing and/or treating Alzheimer's and other amyloid related disease e.g. cerebral amyloid angiopathy; for altering serum levels of amyloid-beta in a mammal and favours the clearance of soluble amyloid-beta or fibril amyloid-beta from the mammal; and reducing or inhibiting the formation of plaques. It is also used for treating AA (reactive) amyloid diseases including carbinists, ankylosing spondylitis, psoriasis, psoriatic arthropathy, Reiter's syndrome, Adult Still's disease, Bechet's syndrome and Crohn's Gisease. AA deposits are also produced as a result of chronic microbial inflemmanch (preferably leprosy, tuberculosis, bronchiectasis, decubitus culcers, chronic pyelonephritis, osteomyelitis and Whipple's disease). Certain malignant neoplasms can also result in AA fibril amyloid deposits including Hodgkin's lymphoma, renal carcinomas of gut, lung and urogenital tract, basal cell carcinoma and hairy cell leukaemia. The present sequence is an Abeta peptide used to illustrate the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

Vaccine antigen amyloid-beta related amino acid sequence.

(first entry)

07-OCT-2004

```
The present invention describes compositions (C) comprising: (a) a first agent (a1) that prevents or treats amyloid-beta related disease, and (b) ca second agent (a2) that is: (i) a peptide or peptidenimetic that conducts a modulates amyloid-beta fibril formation or induces a prophylactic or therapeutic immune response against amyloid-beta fibril formation; or therapeutic immune response against amyloid-beta fibril formation; or therapeutic immune system modulator that prevents or inhibits amyloid-beta fibril formation. Also described is a kit comprising (C). (C) have notionable of anticonvolsant, antichyloid, vasotropic, cardiovascular, tranquilliser, uropathic, anticonvolsant, antichyloid, vasotropic, cardiovascular, tranquilliser, or uropathic, anticonvolsant, antichyloid, vasotropic, cardiovascular, cardiant, antichyloid, beta fibril formation modulators, and as modulators. (C) can be used for preventing or treating an camploid-beta related disease e.g. Alzheimer's disease (including sporadic (non-hereditary) or familial (hereditary)), mild cognitive impairment, amyloid angiopathy, hereditary cerebral hemorrhage, senile dementia, condition associated with Alzheimer's disease.

Commune syndem modulators associated with Alzheimer's disease (including hypothyroidism, cerebral hemorrhage, senile dementia, condition associated with Alzheimer's disease.

Cincluding hypothyroidism, cerebrovascular disease, candiovascular disease, memory loss, anxiety, a behavioural dysfunction (e.g. apathy, aggression, or incontinence), a neurological condition (e.g. thuntington's disease, amyotrophic lateral sclerosis, acquired immunodeficiency, barkinson's disease, aphasia, apraxia, agnosia, perceptive schement and with Lewy bodies, altered muscle tone, seizures, sensory loss, visual cattack or stroke, transient alerthes, attention deficit, frequent falls artack or stroke, transient alerthess, attention deficit, frequent falls artack or stroke, transient letters, brain injury, or posthypoxic

The present invention describes compositions (C) comprising: (a) a first agent (a1) that prevents or treats amyloid-beta related disease; and (b) as second agent (a2) that is: (1) a peptide or peptidemimetic that condulates amyloid-beta fibril formation or induces a prophylactic or therapeutic immune response against amyloid-beta fibril formation, or therapeutic immune system modulator that prevents or inhibits amyloid-beta fibril formation. Also described is a kit comprising (C). (C) have noctropic, neuroprotective, cerebroprotective, haemostatic, or notropic, neuroprotective, cerebroprotective, haemostatic, or uropathic, antichyroid, vasotropic, cardiovascular, resurcheptic, acardiant, antidepressant, endocrine and hypnotic activities, and can be used as amyloid-beta fibril formation modulators, and as immune system modulacors. (C) can be used for preventing or treating an amyloid-beta related disease e.g. Alzaheimer's disease (including sporadic (non-hereditary) or familial (hereditary)), mild cognitive impairment, amild-to-moderate cognitive impairment, vascular dementia, cerebral amyloid angiopathy, hereditary cerebral haemorrhage, senile dementia, companial amyloid angiopathy, hereditary cerebral haemorrhage, senile dementia, contact and an analyloid angiopathy, hereditary cerebral haemorrhage, senile dementia, contact and an analyloid angiopathy, hereditary cerebral haemorrhage, senile dementia, contact and an analyloid angiopathy, hereditary cerebral haemorrhage, senile dementia, contact and an analyloid angiopathy, hereditary cerebral haemorrhage, senile dementia, contact and an analyloid angiopathy, hereditary cerebral haemorrhage, senile dementia, contact and an analyloid angiopathy, hereditary cerebral haemorrhage, senile dementia, contact and an and an analyloid angiopathy, hereditary cerebral haemorrhage, senile dementia, contact and an analyloid angiopathy, hereditary cerebral and anyloid angiopathy, hereditary cerebral and anyloid angiopathy, hereditary cerebral and anyloid angiopathy, hereditar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              degementation, or a countinous described when the conditions of a countinous of degements of defection depressed mood, irritability, anhedonia, social withdrawal, or described of deation, depressed mood, irritability, anhedonia, social withdrawal, or described of precursor protein gene, an ApoB gene, or a presentlin gene, an ApoB gene, or a presentlin gene, an antifitibility degement of that can be used as an antifition of anyloid-beta deposite. The present sequence represents a peptide of that can be used as an antifition of anyloid-defement of the present of the can be used as an antifition of anyloid-defement of the present of the can be used as an antifition of anyloid-defement of the present of the can be used as an antifition of the defection of the present of the can be used as an antifition of the defection of the present of the can be used as an antifition of the defection of the present of the can be used as an antifition of the defection of the present of the can be used as an antifition of the present of the can be used the degement of the present of the can be used to the present of the can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Composition for treating e.g. Alzheimer's disease comprises first agent that prevents or treats amyloid-beta related disease and second agent that is either a peptide or peptidomimetic or an immune system modulator.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Disclosure; Page 70; 143pp; English.

Composition for treating e.g. Alzheimer's disease comprises first agent that prevents or treats amyloid-beta related disease and second agent that is either a peptide or peptidomimetic or an immune system modulator.

Disclosure; Page 69; 143pp; English.

definition that prevents compositions (1) compositions (2) compositions (3) that is:

a second agent (a2) that is: (i) a peptide or peptidomimetic that
modulates amyloid-beta fibril formation or induces a prophylactic or
therapeutic immune response against amyloid-beta fibril formation; or
therapeutic immune response against amyloid-beta fibril formation; or
(ii) an immune system modulator that prevents or inhibits amyloid-beta
(fibril formation. Also described is a kit comprising (C). (C) have
nootropic, neuroprotective, cerebroprotective, haemostatic,
ophthalmological, antithyroid, vasotropic, cardiovascular, tranquilliser,
curopathic, anticonvulsant, antidepresant, endocarine and hypnotic activities,
and can be used as amyloid-beta fibril formation modulators, and as
munus system modulators. (C) can be used for preventing or treating an
amyloid-beta related disease e.g. Alzheimer's disease (including sporadic
(non-hereditary) or familial (hereditary)), mild cognitive impairment,
complete cognitive impairment, vascular dementia,
complete angiopathy, hereditary cerebral haemostrade, senile dementia,
complete the complete cognitive impairment, and encourable complete cognitive impairment, and encourable cognitive impairment encourable present invention describes compositions (C) comprising: (a) a first (including hypothyroidism, cerebrovascular disease, cardiovascular The

disease, memory 1000; a neutrological condition (e.g. Huntington's disease, amyotrophic lateral sclerosis, acquired immunodeficiency, disease, amyotrophic lateral sclerosis, acquired immunodeficiency, disease, aphasia, apraxia, agnosia, pick disease, dementia with Lewy bodies, altered muscle tone, seizures, sensory loss, visual field deficits, incoordination, gait disturbance, translent ischaemic attack or stroke, transfent alertness, attention deficit, frequent falls, synope, neuroleptic sensitivity, normal pressure hydrocephalus, subdural haematoma, brain tumour, posttraumatic brain injury, or posthypoxic damage), or a psychological condition (e.g. depression, delusions, clilusion, hallucination, sexual discreter, weight loss, psychosis, a sleep disturbance, insomnia, behavioural disinhibition, poor insight, suicidal deation, depressed mood, irritability, anhedonia, social withdrawal, or excessive guilt)) in a subject e.g. human having a genomic mutation in an emyloid precursor protein gene, an ApoB gene, or a presentlin gene; having amyloid-beta deposits. The present sequence represents a peptide the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     amyloid-beta, amyloid-beta related disease;

The present liveration describes compositions (C) comprising: (a) a first agent (a) that prevents or treats amyloid-beta related disease; and (b) a second agent (a) that is: (i) a peptide or peptidomimetic that modulates amyloid-beta fibril formation or induces a prophylactic or modulates amyloid-beta fibril formation, or therapeutic immune system modulator that prevents or inhibits amyloid-beta (ibril formation, Also described is a kit comprising (C). (C) have contropic, neuroprotective, cerebroprotective, haemostatic, tranquilliser, uropathic, anticonvulsant, antidepressant, endocrins and hypnotic activities, and can be used as amyloid-beta fibril formation modulators. (C) can be used for preventing or treating an can be used as amyloid-beta fibril formation modulators and as immune system modulators. (C) can be used for preventing or treating an can be used as amyloid-beta fibril formation modulators and as immune system modulators. (C) can be used for preventing or treating an immune system modulators. (C) can be used for preventing or treating an immune system modulators. (C) can be used for preventing or treating an immune system modulators. (C) can be used for preventing or treating or familial (bereditary) or familial (bereditary)), mild cognitive impairment, vascular dementia, carebrath moderate and as anyloid-bet areditary confittion associated with Alzahamer's disease.

C) con-bereditary or a condition associated with Alzahamer's disease.

C) con-bereditary or a condition associated with Alzahamer's disease.

C) con-bereditary, on a condition associated with Alzahamer's disease.

C) con-bereditary or a condition associated with Alzahamer's disease.

C) desease, amortyloss, anxiety, a behavioural dysfunction (e.g. apathy, alsease, amortyloss, anxiety, a spension of desease, amountyloss, anxiety, a spension of deficit, frequent fallations, estimated, sensory loss, visual field deficits, incoordination, genical and sensor sensors of disease, amountylosical condition (e.g. depression, depressed mood, irr
                                                                                                                                Composition for treating e.g. Alzheimer's disease comprises first agent that prevents or treats amyloid-beta related disease and second agent that is either a peptide or peptidomimetic or an immune system modulator.
                                                                                                                                                                                                                                                                The present invention describes compositions (C) comprising: (a) a first

```
Partial sequence of amyloid beta peptide critical for its polymerisation.
                                                                                                                                                                                                                                             AAW02110-W02332 represent the peptide portions of the beta-amyloid modulator compounds of the invention. Beta-amyloid peptide is a 4 kilodalton peptide that is the major protein component of amyloid plaques are present both in the brain lesions, and in the walls of cerebral blood vessels in Alzheimer's disease patients. The amyloid modulators of the invention comprise an amyloidogenic protein or peptide (such as this sequence) coupletely a mayloid adopsing protein or peptide (such as this sequence) coupletely or indirectly to at least one modifying group. The modifying group is preferably a cyclic, heterocyclic, or polycyclic group, such as declain, a cholanyl group, a biotin containing group, or a fluorescein containing group. These compounds then modulate the aggregation of these sequences to natural amyloid proteins or peptides when contacted with the natural
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              amyloidogenic proteins or perficies. The modulator compounds can be used in the treatment of disorders associated with amyloidosis, such as familial amyloid cardiomyopathy, isolated cardiac amyloidosis, systemic senile amyloidosis, scrapis, bovine spongiform encephalopathy, Creutzfeldt-Jakob disease, adult-onset diabetes, insulinoma, familial Mediterranean fever, familial amyloid nephropathy with urticaria and deafness, hereditary cerebral haemorrhage and other types of amyloidosis. The modulators are also useful for the treatment of disorders associated with beta-amyloidosis, especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Amyloid beta peptide, Alzheimer's disease, polymerisation, aggregation, positron emission tomography, PET, Down's syndrome, amyloidosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                            effects of amyloid beta protein and which can be used to ameliorate amnesia and other neurotoxicity in Alzheimer's disease caused by deposition of this protein. The peptides themselves are not amnestic or memory-enhancing. The new peptides are described in AAR87912, AAR87913 and AAR87914. The present sequence is an additional peptide tested in the process but found not to be active
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Beta-amyloid; modulator; amyloid plaque; brain lesion; amyloidosis; cerebral blood vessel; Alzheimer's disease; amyloidogenic protein; familial amyloid polyneuropathy; familial amyloid cardiomyopathy; isolated cardiac amyloidosis; systemic senile amyloidosis; insulinoma; bovine spongiform encephalopathy; Creutzfeldt-Jakob disease; urticaria; adult-onset diabetes; familial Mediterranean fever; therapy; deafness; scrapie; familial amyloid nephropathy; hereditary cerebral haemorrhage.
                                                                                                                                                                                                                                                                                                                         New peptide(s) which block binding of amyloid beta protein - used for antagonising the amnestic effects of amyloid beta protein, partic. in Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to three new peptides which block the amnestic

This is a partial sequence of the amyloid beta peptide which is critical for its polymerisation. The invention relates to the use of peptide (ABP), compounds for inhibition of polymerisation of amyloid beta peptide (ABP), cas model substances for synthesis of ABP-ligands for inhibition of cas model substances for synthesis of ABP-ligands for inhibition of cas model substances for synthesis of ABP-ligands for inhibition of compounds with similar functional properties, or as ligands in positron comparably. The peptides may be used in treatment of amyloidosis, especially in treatment of Alzheimer's disease associated with amyloidosis, for treatment or prevention of demens in patients with haemorrhage with amyloidosis (Dutch type) or for the prevention of fibril formation of human amyloid protein. They can also be used for identifying other molecules with similar properties and/or as ligands for detection of amyloid deposits using eg. positron emission tomography. (Updated on 25-MAR-2003 to correct PI field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Amyloid beta peptide; Alzheimer's disease; polymerisation; aggregation; positron emission tomography; PET; Down's syndrome; amyloidosis.

CutyFF with an amino acid residue replaced with alanine. The invention KLVFF with an amino acid residue replaced with alanine. The invention relates to the use of peptide compounds for inhibition of polymerisation of amyloid beta peptide (ABP), as model substances for synthesis of ABP-ligands for inhibition of polymerisation of ABP, as a tool for the ligands for inhibition of polymerisation of ABP, as a tool for the identification of other organic compounds with similar functional properties, or as ligands in positron emission tomography. The peptides may be used in treatment of amyloidosis, especially in treatment of Alzhamer's disease associated with amyloidosis, for treatment or prevention of demens in patients with Down's syndrome, for treatment or prevention of hereditary cerebral haemorrhage with amyloidosis (Dutch prevention of the prevention of fibzil formation of human amyloid protein. They can also be used for identifying other molecules with similar properties and/or as ligands for detection of amyloid deposits using e.g. position emission tomography.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Amyloid beta peptide, Alzheimer's disease, polymerisation, aggregation, positron emission tomography; PET; Down's syndrome; amyloidosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence represents a fragment of the amyloid beta peptide. The invention relates to the use of peptide compounds for inhibition of polymerisation of amyloid beta peptide (ABP), as model substances for synthesis of ABP-ligands for inhibition of polymerisation of ABP, as a tool for the identification of other organic compounds with similar
                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Use of new and known peptide(s) for inhibition of polymerisation of amyloid beta peptide - e.g. for treatment of Alzheimer's disease or Down's syndrome associated with amyloidosis.
                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                           Length 5;
                                                                                                                                                                                                                                                                                                                                                                                                                             Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Tjernberg LO,

functional properties, or as ligands in positron emission tomography. The peptides may be used in treatment of amyloidosis, especially in treatment of Alzheimer's disease associated with amyloidosis, for treatment or prevention of demens in patients with Down's syndrome, for treatment or prevention of hereditary cerebral haemorrhage with amyloidosis (Dutch type) or for the prevention of fibril formation of human amyloid protein. They can also be used for identifying other molecules with similar properties and/or as ligands for detection of amyloid deposits using e.g. positron emission tomography. (Updated on 25-MAR-2003 to correct PI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New conjugates are disclosed which are of formula A-Z, in which: A is (1) a cyclosporin A analogue described in AAW29087 or (2) an FK506 binding peptide inhibitor; and Z is a polypeptide comprising 5 or more contiguous residues of A-beta peptide. The compounds are novel chemical inducers of dimerization which are non-immunosuppressive and which are inhibitors of A-beta peptide aggregation and deposition in amyloid plaques. The adverse consequences of amyloid plaque formation can be prevented or ameliorated by sequestering the A-beta peptide in monomeric form with a conjugate which links the A-beta to cyclophilin or FKBP, therefore providing a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New A-b-binding peptide conjugates and CsA analogs - useful in treatment of neurological diseases e.g. Alzheimer's disease, Multiple Sclerosis

The bAP derivatives are also used to diagnose these diseases, in vitro or in vivo, by detecting binding of bAP to labelled bAP derivatives inhibit bAP aggregation even when bAP is present in molar excess. The present sequence represents a bAP derivative
mechanism to minimize the amount of free A-beta available for fibril formation and deposition. The compounds can be used for the treatment of Alzheimer's disease, multiple sclerosis and amyotrophic lateral sclerosis
                                                                                                                                                                                                                                                                                                                                                                                  Human; beta-amyloid peptide; Alzheimer's disease; amyloidogenic protein; aggregation; neurotoxicity; amyloidosis; Down's syndrome; cardiomyopathy, familial amyloid polyneuropathy; bovine spongiform encephalopathy; Creutzfeldt-Jakob disease; bAP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes beta-amyloid peptide (bAP) derivatives.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New peptide(8) derived from beta-amyloid peptide that inhibit amyloid aggregation - and neurotoxicity, specifically for treatment and prevention of Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Benjamin H;

Novel chemical compound or composition useful for preventing beta-strand association, comprises peptides containing N-alpha substituted L-amino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antifibrillogenic agent useful for inhibiting amyloidosis and/or for cytoprotection for treating amyloidosis disorders, comprises a peptide,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nootropic; neuroprotective; antifibrillogenic; amyloidosis inhibition; cytoprotection; amyloid deposit degradation; amyloidosis disorder; Alzheimer's disease.
                                                                                                                                                                                                                                                                            The present invention relates to a chemical compound or composition comprising a peptide with a beta strand forming section and associates with a target beta-strand formed by a separate peptide-containing molecule. The invention is useful for inhibiting or reversing the association of target beta-strand, formed by Alzheimer's Abeta peptide into a beta-sheet or beta-fibre and the aggregation of proteins or
                                                                                                                                                                                                                                                                                                                                                                                                                                   100.0%; Score 19; DB 4; Length 5; ilarity 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes a beta-amyloid inhibitor peptide. Beta-amyloid inhibitors have neuroprotective and nootropic properties. The inhibitor peptides are useful for the treatment of Alzheimer's disease. The present sequence represents a beta-amyloid recognition peptide used in the exemplification of present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                     for inhibiting amyloidosis and/or for cytoprotection. The peptides of AAB48474-B48496 cause the breakdown of amyloid deposits and are therefore useful for treating amyloidosis disorders such as Alzheimer's disease. Peptides AAB48474-B48496 were identified from the glycosaminoglycan binding region and the prot-prot interaction region of the human amyloid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Peptides AAB48474-B48496 are antifibrillogenic agents that can be used for inhibiting amyloidosis and/or for cytoprotection. The peptides of AAB48474-B48496 cause the breakdown of amyloid deposits and are therefore useful for treating amyloidosis disorders such as Alzheimer's disease. Peptides AAB48474-B48496 were identified from the glycosaminoglycan binding region and the prot-prot interaction region of the human amyloid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antifibrillogenic agent useful for inhibiting amyloidosis and/or for cytoprotection for treating amyloidosis disorders, comprises a peptide, its isomer or peptidomimetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nootropic; neuroprotective; antifibrillogenic; amyloidosis inhibition; cytoprotection; amyloid deposit degradation; amyloidosis disorder; Alzheimer's disease.
                                                          Peptides AAB48474-B48496 are antifibrillogenic agents that can be used

The present sequence is that of an all-D peptide suitable for use in preparing vaccines for preventing or treating Alzheimer's disease and confort related disorders in humans. It is based on a portion of amyloid related disorders in humans. It is based on a portion of amyloid-beta peptide (see AABB262), and may be modified by removing or inserting 1 or more amino acid residues, or by substituting 1 or more conforts and or or acid residues with other amino acid residues or non-amino acid fragments. Vaccines of the invention are produced using 'non-self' peptides synthesised from the unnatural D-configuration amino acids to avoid the drawbacks of 'self' proteins. The all-D peptides need not be aggregated to be operative or immunogenic. They preferably interact with at least 1 region of an amyloid protein, e.g. the beta-sheet region or a GAG-binding site region, the amyloid-beta peptide, or their immunogenic fragments protein conjugates, immunogenic derivative peptides and immunogenic peptidemimetics. Examples include all-D peptides and immunogenic peptidemimetics. Examples include all-D peptides and corresponding to residues 1-42, 1-40, 1-35, 1-28, 1-7, 10-16, 16-13 and 16-42, 1-40, 1-35, 1-28, 1-7, 10-16, 16-13 and 16-42 and 18-42 and 18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Preventing/treating amyloid-related disease, especially Alzheimer's disease, comprises administering antigenic all-D peptide, eg. as vaccine, which elicits production of antibodies to prevent fibrillogenesis and
                                                                                                                                                                                                Alzheimer's disease; amyloidosis; amyloid-related disease; vaccine;
                                                                                                                                               All-D peptide used in Alzheimer's disease vaccine
                                                                                                                                                                                                                                                                                                                                            . .5

It is based on a portion of amyloid-beta peptide (see AABB2622), and may be modified by removing or inserting 1 or more amino acid residues, or by substituting 1 or more amino acid residues with other amino acid residues or non-amino acid fragments. Vaccines of the invention acid residues or non-amino acid coppides synthesised from the unnatural D-configuration amino acids to avoid the drawbacks of self proteins. The all-D peptides need not be aggregated to be operative or immunogenic. They preferably interact with car least 1 region of an amyloid protein, e.g. the beta-sheet region or at least 1 region of an amyloid protein, e.g. the beta-sheet region or C GAG-binding site region, the amyloid-beta peptide, or their immunogenic fragments, protein conjugates, immunogenic derivative peptides and corresponding to residues 1-42, 1-40, 1-35, 1-28, 1-7, 10-16, 16-21 and corresponding to residues 1-42, 1-40, 1-35, 1-20, 1-7, 10-16, 16-21 and C T ARBESCA3-64. The vaccine elicits a preferential TH-2 or TH-1 response, preventing fibrillogenesis and associated cellular toxicity. The amyloid related diseases may be localised amyloidosis, e.g. diabetes type II, neurodegenerative diseases, e.g. bovine spongiform encephalitis,

This invention relates to a peptide containing Nalpha substituted alpha-D canno acid residues optionally with Nalpha un substituted alpha-D amino acids, which is capable of associating specifically with beta-strands cormed by other protein or peptide molecules and there fore inhibiting their aggregation into extended beta-sheets. The peptides exhibit cheir aggregation into extended beta-sheets. The peptides exhibit controprotective, anticonvulsant, and acrebroprotective activity. The peptides in used for antiparkinsonian, and exebroprotective activity. The peptides in vivo inhibiting or reversing the aggregation of proteins or peptides in the refolding of denatured or aggregated or in vitro, for assisting in the refolding of denatured or aggregated or vitro diagnosis, study or treatment of diseases caused by aggregation of proteins or peptides into insoluble beta fibres. The diseases include proteins or peptides into insoluble beta fibres. The diseases include prion-related encephalopathies e.g. Alzheimer's disease, Parkinson's disease, prion-related encephalopathies e.g. bowine spongiform encephalopathy (BSB) and its human forms Creutzfeldt-Jakob disease and kuru, throughn, the perion of the prion attophy,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Chemical compound/composition for e.g. treating neurodegenerative diseases, comprises peptide comprising Nalpha substituted alpha-D-aminoacid residues which inhibit the aggregation of other proteins/peptides
                                                                                                                                                                                           Beta-amyloid peptide; beta-sheet formation inhibitor; neuroprotective; antidiabetic; nootropic; anticonvulsant; antiparkinsonian; BSE; kuru; cerebroprotective; Alzheimer's disease; Parkinson's disease; bovine spongiform encephalopathy; Creutzfeldt-Jākob disease; Huntington's disease; muscular atrophy; spinocerebellar ataxia; type II diabetes mellitus; amyloidosis.
                                                                                                                                                                Residues 16-20 of beta-amyloid peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Example 1; Page 42; 76pp; English.
                                    AAB62803 standard; peptide; 5 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          99GB-00017725.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            28-JUL-2000; 2000WO-GB002923

dentatorubral-pallidoluysian atrophy, and at least 5 genetically distinct
               forms of spinocerebellar ataxia; Non-neurodegenerative diseases such as type II diabetes mellitus, familial amyloidosis and dialysis-related amyloidosis. The present sequence represents a fragment of the Alzhahmer's disease related beta-amyloid peptide. The peptide is used in an example illustrating the use of a peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention describes an amyloid modulator comprising an amyloidogenic protein and/or peptide fragment coupled to a modifying group so that the compound modulates the aggregation of natural amyloid proteins or peptides. The modulator is used for treating a disorder associated with amyloidosis e.g. familial amyloid polyneuropathy (Portuguese, Japanese and Swedish types), familial amyloid cardiomyopathy (Danish type), isolated cardiac amyloid, systemic senile amyloidosis, scrapie, bovine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Beta-amyloid; amyloid modulator; amyloidogenic protein; amyloidosis; familial amyloid polyneuropathy; familial amyloid cardiomyopathy; familial amyloid cardiomyopathy; solated cardiac amyloid; systemic senile amyloidosis; scrapie; myeloma; bovine spongiform encephalopathy; BSE; Creutzfeldt-Jakob disease; adult onset diabetes; Gerstmann-Straussler-Scheinker syndrome; insulinoma; atrial amyloidosis; idiopathic amyloidosis; haemodialysis; macroglobulinaemia-associated amyloidosis; reactive amyloidosis; primary localised cutaneous nodular amyloidosis; Sjogren's syndrome; hereditary cerebral haemorrhage with amyloidosis; Muckle-Wells syndrome; hereditary non-neuropathic systemic amyloidosis;

diabetes, Geretmann-Straussler-Scheinker syndrome, insulinoma, isolated atrial amyloidosis, idiopathic (primary) amyloidosis, myeloma or macroglobulinaemia-associated amyloidosis, primary localised cutaneous nodular amyloidosis associated with Sjogren's syndrome, reactive condary) amyloidosis, familial Mediterranean Fever and familial amyloidonephy with urticaria and deafness (Muckle-Wells syndrome), hereditary cerebral haemorrhage with amyloidosis of Icelandic type, hereditary cerebral haemorrhage with amyloidosis associated with long term haemodialysis, hereditary nonneuropathic systemic amyloidosis (familial amyloidosis associated with camilial amyloidosis of Finnish type, amyloidosis associated with real amyloidosis and Inysoryme-associated hereditary systemic amyloidosis and lysoryme-associated hereditary systemic amyloidosis. The compound is capable of altering and inhibiting beta-amyloidosis. The compound is capable of altering and inhibiting beta-amyloidosis. The modulator. This sequence represents a fragment of the relative to the modulator. This sequence represents a fragment of the long form of beta-amyloid used in the creation of an amyloid modulator.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention comprises an aggregation inhibitor of beta-amyloid protein (Abeta). The aggregation inhibitor of the invention has the sequence Lysteu-Val-Phe-Phe with a modified C-terminal of aspartyl-ampartyl (aminoethoxy) ethoxyacetic acid. The Abeta aggregation inhibitor of the invention is useful for the prevention, diagnosis and treatment of Alzheimer's disease. The present amino acid sequence represents the Abeta aggregation inhibitor peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            An aggregation inhibitor of beta-amyloid protein of sequence Lys-Leu-Val-Phe-Phe with modified C-terminal of aspartyl-aspartyl- (aminoethoxy)ethoxyacetic acid, for prevention, diagnosis and treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Abeta, beta-amyloid protein aggregation inhibitor, Alzheimer's disease; C-terminal aspartyl-aspartyl (aminoethoxy) ethoxyacetic acid.

```
The present invention describes an amyloid modulator compound (I)

C comprising an aggregation core domain and a modifying group attached to

C cit. (I) has nootropic, neuroprotective, immunosuppressive, antimicrobial,

C antidiabetic, antipyratic, dermatological, cardiovascular, nephrotropic

and auditory activities, and can be used as a natural amyloid aggregation

C inhibitor and a neurotoxicity inhibitor of natural bara amyloid aggregation

C inhibitor and a neurotoxicity inhibitor of natural beta amyloid peptide

C inhibitor and a neurotoxicity inhibitor of natural beta amyloid aggregation

C diagnosis or treatment of an amyloidogenic disease e.g. Alzheimer's

C diagnosis or treatment of an amyloidogenic disease e.g. Alzheimer's

C diagnosis or treatment of an amyloidogenic disease e.g. Alzheimer's

C diagnosis or treatment of an amyloidogenic disease e.g. Alzheimer's

C diagnosis or treatment of an amyloidogenic disease e.g. Alzheimer's

C diagnosis or treatment of an amyloidogenic disease e.g. Alzheimer's

C diagnosis or treatment of an amyloidogenic disease e.g. Alzheimer's

C diagnosis or treatment of an amyloidogenic disease e.g. Alzheimer's

C diagnosis or treatment of an amyloidogenic disease e.g. Alzheimer's

C diagnosis or treatment of an amyloidogenic disease e.g. Alzheimer's

C nom's syndrome individuals and in patients with hereditary creebral

C toxicity of natural beta.Ap aggregates to cultured neuronal cells. (I)

C toxicity of natural beta.Ap aggregates to cultured neuronal cells.

C ability to reduce the neurotoxicity of performed A-beta fibrils. The

D reduces the complification of the present invention

Beta amyloid peptide (16-20) SEQ ID NO:10.

02-APR-2002 (first entry)

ABB05158;

ABB05158 standard; peptide; 5 AA.

RESULT 35

```
The present invention describes an amyloid modulator compound (I)

CC comprising an aggregation core domain and a modifying group attached to

CC comprising an aggregation core domain and a modifying group attached to

CC antidiabletic, antipyratic, dermatological, cardiovascular, nephrotropic

and auditory activities, and can be used as a natural amyloid aggregation

CC inhibitor and a neurotoxicity inhibitor of natural bard amyloid aggregation

CC inhibitor and a neurotoxicity inhibitor of natural begins

CC intraction of an amyloidogenic disease e.g. Alzheimer's

disease and other clinical occurrences of beta amyloid deposition such as

CC diagnosis or treatment of an amyloidogenic disease e.g. Alzheimer's

CC disease and other clinical occurrences of beta amyloid deposition such as

CC haemorrhage with amyloidosis, and for treating a disorder associated with

CC manyloidosis such as familial amyloid polymeuropathy. (I) reduces the

CC contonly reduces the formation of neurotoxic aggregates but also have the

CC ability to reduce the neurotoxicity of performed A-beta fibrils. The

CD present sequence represents a beta-AP peptide, which is used in the

CC exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Amyloid modulator compound useful for treatment of an amyloidogenic disease such as Alzheimer's disease comprises an aggregation core domain and a modifying group attached to it.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Hundal A;

                                                                                                                                                                                                                                                                                                   amyloid targeting molety, a linker molety and alabelling scene computation and amyloid cargeting molety, A linker molety and a labelling molety. The agent is of general formula A t-(A l n k) z-A l a b (1) where z = 0 - 1; A = a labelling molety, A l = a linker molety; and A l a b = a labelling molety. Also included are imaging amyloid deposition or diagnosing an amyloid-related condition in a patient involving administering (1) to the patient, and ultrasound imaging (1) in the patient, and ultrasound imaging (1) in the patient to determine the presence of amyloid or amyloid-related condition; and a kit for preparing a radiopharmaceutical preparation comprising (1), a reducing agent, a biffering agent, a transchelating agent, and instructions for the preparation and use of the radiopharmaccutical in the imaging of amyloid deposition and for diagnosing an amyloid related condition. The agents are used for imaging amyloid deposition and for diagnosing an amyloid related condition e.g. Creutzfeldt-Jakob disease (CuD), kuru, transmissible cerebral amyloidoses (transmissible virus dementias), familial CuD, scrapie, transmissible mink encephalopathy, bovine spongiform

encephalopathy (BSE), inflammation-associated amyloid, type II diabetes, primary amyloidosis, feline spongiform encephalopathy, non-transmissible ecebral amyloidosis, Alzheimer's diseases, prion-mediated diseases, disease, related amyloidosis, Ilight chain-related amyloidosis, cerebral amyloid angiopathy. The agents are capable of crossing the blood-brain paraies and are capable of binding specifically to amyloid plaques. The agent sequence is a peptide forming the amyloid targeting moiety of the agent of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an amyloid-targeting imaging agent comprising an amyloid targeting moiety, a linker moiety and a labelling moiety. The spent is of general formula \mathbf{A}_{-}(-\mathbf{A}_{-}\mathbf{l}_{-}\mathbf{k})^2 - \mathbf{A}_{-}\mathbf{l}_{-}\mathbf{k} in where \mathbf{z} = 0 - 1; \mathbf{A}_{-}\mathbf{l}_{-}\mathbf{k} is an amyloid targeting moiety, \mathbf{A}_{-}\mathbf{l}_{-}\mathbf{l}_{-}\mathbf{k} in \mathbf{k}_{-}\mathbf{l}_{-}\mathbf{l}_{-}\mathbf{k} in a patient moiety, and \mathbf{A}_{-}\mathbf{l}_{-}\mathbf{l}_{-}\mathbf{k} alabelling moiety, Also included are imaging amyloid deposition or administering an amyloid-related condition in a patient involving administering (I) to patient of amyloid or amyloid-related condition patient to determine the presence of amyloid or amyloid-related condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New amyloid-targeting imaging agents useful for in vivo imaging amyloid plaques and/or for the treatment of amyloidosis disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

i, and a kit for preparing a radiopharmaceutical preparation comprising (I), a reducing agent, a buffering agent, a transchelating agent, and instructions for the preparation and use of the radiopharmaceutical in the imaging of amyloid or an amyloid-related condition. The agents are used for imaging amyloid deposition and for diagnosing an amyloid related condition e.g. Creutifeld-Jakob disease (CDI), kuru, transmissible cerebral amyloidoses (transmissible wirus dementias), familial CDD, scrapie, transmissible mink encephalopathy, bovine spongiform encephalopathy (BSE), inflammation-associated amyloid, type II diabetes, primary amyloidosis, feline spongiform encephalopathy, non-transmissible cerebral amyloidosis, feline spongiform encephalopathy, non-transmissible cerebral amyloidosis, light chain-related amyloidosis, cerebral amyloid angiopathy. The agents are capable of crossing the blood-brain amyloid angiopathy. The agents are capable of crossing the blood-brain aperies are capable of crossing the blood-brain present sequence is a peptide forming the amyloid targeting moiety of the present of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Transglutaminase inhibitor; Factor XIII inhibitor; XIIIa inhibitor; ophthalmological; antinflammatory; antirheumatic; antiarthritic; thrombolytic; neuroprotective; nootropic; antiseborrheic; dermatological; cytostatic; anti-HIV; antipsoriatic; cataract; inflammatory disease; arthritis; thrombosis; Alzheimer's disease; Huntington's chorea; acne; cancer; HIV infection; psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes novel amino acid or peptide derivatives or analogues (I), containing a modified side-chain (e.g. containing a formyl group) which are transglutaminase inhibitors and Factor XIII/XIIIa inhibitors. The products of the invention have ophthalmological, antiinflammatory, antirheumatic, antiarthritic, thrombolytic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New amino acid or peptide derivatives or analogs, are selective transglutaminase inhibitors useful e.g. for treating cataract, inflammatory diseases, rheumatoid arthritis, thrombosis, Alzheimer's disease and cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;

cartiviticetizet, incuring activity. (1) are transglutaminase inhibitors, captured activity. (2) are transglutaminase inhibitors, captured activity. (3) are transglutaminase inhibitors, captured in and/or alpha 2-plasmin inhibitor), incorporation of primary amines in proteins and peptides, hydrolysis of the gamma-captoxamido group of glutamine residues bound in proteins or peptides, blood factor XII/XXIII and mammalian, human, tissue, liver, brain, eye lens, keratinocyte, epidermal, protetate, plant, parasitic and/or bacterial transglutaminases. The products of the invention can be used to transglutaminases. The products of the invention can be used correct activities, thrombosis, Alzheimer's disease, Huntington's chorea, cancer (by induction of apoptosis), HIV infections and psoriasis. (1) Are targeted and specific transglutaminase inhibitors, which can inhibit a specific type of transglutaminase in the human or animal body without affecting other transglutaminases. ABB84001-ABB84049 represent transglutaminase in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a new method of inhibiting cerebral amyloid angiopathy. The new method of the invention involves contacting a blood vessel wall cell with an amyloid-beta40 inhibitor. The invention can be used for treating disease states characterised by cerebral amyloid angiopathy, particularly Alzheimer's disease, hereditary cerebral haemorrhage with amyloidosis of the Dutch type and haemorrhagic stroke. The present sequence represents one of a group of peptides (AAU11648-AAU11910 & AAU11911) that were used in the invention as a carrier for the amyloid-beta40 (Abeta40) inhibitor. The Abeta40 inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Inhibiting cerebral amyloid angiopathy used for treating e.g. Alzheimer's disease comprises contacting blood vessel wall cell with amyloid-beta 40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Amyloid-beta40 inhibitor; Abeta40 inhibitor; cerebral amyloid angiopathy; CAA; noctropic; neuroprotective; cerebroprotective; Alzheimer's disease; cerebral haemorrhage; amyloidosis; haemorrhagic stroke.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Peptide #8, used as a carrier for the amyloid-beta40 (Abeta40) inhibitor.
neuroprotective, nootropic, antiseborrheic, dermatological, cytostatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                       .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a new method of inhibiting cerebral amyloid anajopathy. The new method of the invention involves contacting a blood vessel wall cell with an amyloid-beta40 inhibitor. The invention can be used for treating disease states characterised by cerebral amyloid haemorrhage of the myloidosis of the Dutch type and haemorrhagic stroke. The present sequence represents one of a group of peptides (AAU11648-AAU11669, AAU11910 & AAU11911) that were used in the invention as a carier for the amyloid-beta40 (Abeta40) inhibitor. The Abeta40 inhibitor cerebral amyloid angiopathy (CAA)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Inhibiting cerebral amyloid angiopathy used for treating e.g. Alzheimer's disease comprises contacting blood vessel wall cell with amyloid-beta 40 inhibitor.
                                                                                                                                                                                                                                                                                                                                                                Amyloid-beta40 inhibitor; Abeta40 inhibitor; cerebral amyloid angiopathy; CAA; nootropic; neuroprotective; cerebroprotective; Alzheimer's disease; cerebral haemorrhage; amyloidosis; haemorrhagic stroke.
                                                                                                                                                                                                                                                                                                                                     used as carrier for the amyloid-beta40 (Abeta40) inhibitor.
                                                                                                           Gaps
was used in the invention to treat a disease state characterised by cerebral amyloid angiopathy (CAA)
                                                                                                           ö
                                                                                                       Indels

The invention relates to a peptide (I) inhibiting fibrillogenesis, that comprises a beta-strand with two faces, where the first face has hydrogen bonds, and the second face blocks or disrupts propagation of hydrogen combined and the second face blocks or disrupts propagation of hydrogen bonding between beta-strands needed to form fibrils. (I) is useful for inhibiting fibrillogenesis, for detecting fibrils in a subject and for composition comprising (I) is useful for inhibiting associated with pathological states such as Alzheimer's disease, composition comprising (I) is useful for inhibiting or diseasembling fibrils associated with pathological states such as Alzheimer's disease, composition comprising, familial Mediterranean fever, familial amyloid neptropathy with utricaria and deafenss, Muckle-Wells syndrome, composition macroglobulinemia-associated myeloma, familial amyloid cardiomyopathy, isolated cardiac amyloid polymeuropathy, familial amyloid cardiomyopathy, isolated cardiac amyloid polymeuropathy, familial amyloid cardiomyopathy, isolated cardiac amyloidosis, hereditary cerebral haemorthage with amyloidosis, familial canyloidosis, hereditary cerebral haemorthage with amyloidosis, familial canyloidotic polymeuropathy, scrapie, Creutzfeldt-Jakob disease, Gerefmann Straussler-Scheinker syndrome, bovine spongiform encephalitis, prionsediated diseases, or Huntingfon's disease. (I) is useful for treating a subject which is a mammal, preferably human, having protein aggregation disease or protein misfolding disease. The composition is useful in both preventive and curative therapies of fibril based pathologies mentioned above. The present sequence represents a peptide from the core domain of beta-amyloid, and can inhibit Abeta fibrillogenesis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel peptide for inhibiting fibrillogenesis, and for screening fibrillogenesis inhibitors, has beta-strand with one face having hydrogen bonds and other face blocking propagation of hydrogen bonding between

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a method for prevention and/or treatment of an all-D. amyloid-related disease which comprises administration of an all-D. amyloid-beta peptide. The method is used for preventing and/or treating calculated disease e.g. cerebral amyloid angiopathy, for altering serum levels of amyloid-beta in a mammal and angiopathy, for altering serum levels of amyloid-beta in a mammal and favours the clearance of solubbe amyloid-beta in a mammal. and the mammal, and reducing or inhibiting the formation of plaques. It is also used for treating AA (reactive) amyloid diseases including in alternation and plaques. It is also used for treating appointly and arthritis, juvenile chronic arthritis, ankylosing spondylitis, psoriasis, psoriatic arthropathy, Reiter's syndrome, Adult Still's disease, Bechet's syndrome and Crohn's infections (preferably leprosy, tuberculosis, bronchiectasis, decubitus infections (preferably leprosy, tuberculosis, bronchiectasis, decubitus ulcars, chronic pyelonephritis, oan also result in AA fibril amyloid deposits including Hodgkin's lymphoma, renal carcinoma and hairy cell leukaemia. The present sequence is an Abeta peptide used to illustrate the method of the

The invention relates to a method for prevention and/or treatment of an all-D-c amyloid-related disease which comprises administration of an all-D-amyloid-beta peptide. The method is used for preventing and/or treating calculated disease e.g. cerebral amyloid angiopathy, for altering serum levels of amyloid-beta in a mammal and angiopathy, for altering serum levels of amyloid-beta in a mammal and favours the clearance of soluble amyloid-beta in a mammal and caucing or inhibiting the formation of plaques. It is to the mammal; and reducing or inhibiting the formation of plaques. It is also used for treating AA (reactive) amyloid diseases including carburitis, ankylosing spondylitis, psoriasis, psoriatic arthropathy, arthritis, ankylosing spondylitis, psoriasis, psoriatic arthropathy, carburitis, and are also produced as a result of chronic microbial infections (preferably leprosy, tuberculosis, bronchiectasis, decubius culeers, chronic pyelonephritis, or lease, bronchiectasis, desease).

Certain malignant neoplasms can also result in AA fibril amyloid deposits

The invention relates to a peptide inhibitor (ADF60931) of the aggregation of beta-amyloid protein (ADF60932). The peptide inhibitor has a C-terminus which is modified with hydrophilic ether groups having an amino group and a carboxyl group at the ends of the molecule (e.g., poly (aminoethoxy) ethoxylacatic acids). The C-terminally modified peptide inhibitor inhibits the aggregation of beta-amyloid protein (fibril formation), thereby preventing the death of neural cells. The inhibitor is useful in the prevention, treatment, and diagnosis of Alzheimer's disease. The present sequence represents the amino acid sequence of the C-terminally modified inhibitor of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Peptides whose carboxyl terminal is modified with hydrophilic groups, are useful as inhibitors for aggregation of beta-amyloid protein and are used in the treatment of Alzheimer's.
                                                                                                                                                                  Beta-amyloid protein; aggregation inhibitor; fibril formation inhibitor; peptide inhibitor; C-terminal modification; hydrophilic ether group; poly (aminoethoxy)ethoxyacetic acid; neural cell; Alzheimer's disease; nootropic; neuroprotective.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Prion; PrPSC; prions protein; transmissible spongiform encephalopathy

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             treating patients with Alimemer's disease, comprising multiple copies of a plaque-recognition peptide (Phe-Phe-Val-Leu-Lys), where all amino acids are the D-isomer. The compound interferes with formation of fibril from beta-amyloid peptide effecting an inhibition of disease process. It is useful for diagnosing and treating Alzheimer's disease in mammals, especially a human. The present sequence represents a beta-amyloid
including Hodgkin's lymphoma, renal carcinoma, carcinomas of gut, lung and urogenital tract, basal cell carcinoma and hairy cell leukaemia. The present sequence is an Abeta peptide used to illustrate the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Chemical compound for use in diagnosing or treating Alzheimer's disease, comprises multiple copies of a plaque-recognition peptide and is capable of crossing blood brain-barrier.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a chemical compound for use in diagnosing or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      셤
                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                     The present invention relates to a method for detecting pathologically altered prion proteins (PrPsc), which comprises incubating a test sample with a solid carrier to which an agent is able to bind, removing unbound proteins, and detecting proteins bound to the agent. The method is used to diagnose transmissible spongiform encephalopathies in live animals, even shortly after infection. The present sequence is a PrPsC peptide used to demonstrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Amyloidogenic protein; therapy; amyloidosis; familial amyloid polyneuropathy; cardiomyopathy; familial amyloid polyneuropathy; cardiomyopathy; cardiomyopathy; creutand semile amyloidosis; bovine spongiform encephalopathy; creutzfeldt-Jakob disease; Geretmann-Straussler-Scheinker syndrome; diabetes; insulinoma; myeloma; Sjogren's syndrome; familial mediterranean fever; urticaria; deafness; hereitary cerebral heemorrhage; haemodialysis; thyroid; renal amyloidosis; lysozyme-associated hereditary systemic amyloidosis; beta-amyloid peptide; human.
                                                                                                                                                                      Detecting pathological prions in live animals, useful for diagnosis of transmissible spongiform encephalopathy, using immobilized agent that binds to beta-sheets.
                                                                                                                                                                                                                                                                                                                                                                       Gaps

The invention relates to amyloidogenic proteins or peptide fragments aggregation modulators. The invention is used for treating disorder associated with amyloidosis, particularly familial amyloid oblyneuropathy (C contents), isolated cardiac amyloid, systemic senile amyloidosis, corapie, bovine spongiform encephalopathy, Creutzfeldt-Jakob disease, c carapie, bovine spongiform encephalopathy, Creutzfeldt-Jakob disease, c carapie, bovine spongiform encephalopathy, Creutzfeldt-Jakob disease, c insulinoma, isolated atrial amyloidosis, idiopathic (primary) amyloidosis, myeloma or macroglobulinemia-associated amyloidosis, primary amyloidosis, familial Mediterranean Fever syndrome, reactive (secondary) amyloidosis, familial Mediterranean Fever and familial amyloid nephropathy with urticaria and deafness (Mucklemells syndrome), hereditary cerebral haemorrhage with amyloidosis of columnial crype, amyloidosis associated with long term haemodialysis, hereditary non-neuropathic systemic amyloidosis (familial amyloid sasociated with medullary carcinoma of Finnish type, amyloidosis associated with medullary carcinoma of Finnish type, amyloidosis associated with medullary carcinoma of Finnish type, amyloidosis associated myloidosis. The present sequence is beta-amyloid peptide fragment used amyloidosis. The present sequence is beta-amyloid peptide fragment used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Amyloidogenic protein; therapy; amyloidosis; familial amyloid polyneuropathy; cardiomyopathy; saystemic senile amyloid polyneuropathy; cardiomyopathy; cardiomyopathy; creutzfeldt-Jakob disease; derstmann-Straussler-Scheinker syndrome; diabetes; insulinoma; myeloma; Sjogren's syndrome; familial mediterranean fever; urticaria; deafiness; hereditary cerebral hemorrhage; haemodialysis; thyroid; renal amyloidosis; lysozyme-associated hereditary systemic amyloidosis; beta-amyloid peptide; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                           New amyloidogenic protein aggregation modulators useful for treating disorder associated with amyloidosis e.g. familial amyloid polyneuropathy, Creutzfeldt-Jakob disease and adult onset diabetes.

                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to amyloidogenic proteins or peptide fragments aggregation modulators. The invention is used for treating disorder aggregation modulators. The invention is used for treating disorder aggregation modulators. The invention is used for treating disorder associated with amyloidosis, particularly familial amyloid cardiomyopathy (Portuguese, Japanese and Swedish types), familial amyloid cardiomyopathy (Consish type), isolated cardiac amyloid, systemic senile amyloidosis, cardine amyloidosis, bovine spongiform encephalopathy, Creutzfeldt-Jakob disease, Gersmann-Straussler-Scheinker syndrome, adult onset diabetes, inclinoma, isolated atrial amyloidosis, idiopathic (primary) amyloidosis, myeloma or macroglobulinemia-associated myloidosis, primary localized cutaneous nodular amyloidosis, familial Mediterranean Fever syndrome, reactive (secondary) amyloidosis, familial Mediterranean Fever and familial amyloid nephropathy with urticaria and deafness (Mucklewells syndrome), hereditary cerebral haemorhape with mayloidosis of celandic type, amyloidosis associated with hong term haemodialysis, hereditary renal amyloidosis associated with hong term haemodialysis, casociated with medullary carcinoma of the thyroid, fibringen associated hereditary renal amyloidosis and lysozyme-associated hereditary systemic camyloidosis. The present sequence is beta-amyloid peptide fragment used in the content of the thyroid, fibringen associated amyloidosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                      New amyloidogenic protein aggregation modulators useful for treating disorder associated with amyloidosis e.g. familial amyloid polyneuropathy, Creutzfeldt-Jakob disease and adult onset diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;

The present invention relates to a new pharmaceutical composition comprising amyloid beta-derived diffusable ligands (ADDLs) capable of generating an immune response in a host organism, where the composition is a vaccine or a component of a vaccine and where the ADDLs are antigenic, immunogenic or act as a binding molecule when the composition is administered to a host organism. The composition, vaccine or antibodies are useful in inducing an immune response. The composition, peptides, molecules and antibodies are useful in preventing or ameliorating Alzheimer's disease, memory and learning deficits, down's syndrome. The present sequence is a polypeptide shown in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New amyloid beta-derived diffusable ligands, useful in generating an immune response and in preventing, ameliorating or treating Alzheimer's disease, memory and learning deficits, degeneration or malfunction of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           spherical nanostructure; tubular nanostructure; field emitter device; nanoscale environment; electron emission lithography; memory cell; mechanical transmission device; electronic inverter; heat transfer device; electron emission; beta-amyloid; central aromatic core structure; nanotube self-assembly; Alzheimer's disease; beta-amyloid core recognition element.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
immunostimulant; neuroprotective; nootropic; Alzheimer's disease; Down's syndrome; vaccine; amyloid beta; ADDL; amyloid beta-derived diffusable ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

The present invention describes a tubular of spherical nanostructure composed of peptides including no more than 4 aromatic or polyaromatic amino acids. Also described: [1] a method of generating a tubular or spherical nanostructure; [2] a field emitter device; [3] a device for obtaining information from a nanoscale environment; (4) an apparatus for electron emission lithography; (5) a memory cell; (6) a mechanical transfer device; (7) an electronic inverter having a first switching device and a second switching device; (8) a composition; (9) a heat transfer device; (10) a method of emitting electrons; and (11) a method of containing information from a nanoscale environment. The nanostructure can be used in a field emitter device; a device for obtaining information from a nanoscale environment, an apparatus for electron emission continuation from a matrix-containing composition. It is used in electronic inverter, and a matrix-containing composition. It is used in electronic inverter, and a matrix-containing composition. It is used in continuation, grabbing and/or in manipulating nanoscale objects, and manostructure is highly robust under extreme pH and temperatures. It enhances electromagnetic fields near ultra small metal objects; The use of nanostructure is highly robust under extreme pH and temperatures. The nanostructure is sights in electronic device allows operation at low gate voltage and enables the switching of several individual devices on the same substrates. The present sequence allows operation at low gate voltage and enables the switching of several individual devices on the same substrates. The present sequence represents a beta-amyloid central aromatic core structure amino acid sequence, which is used in an example from the present invention for the ananostucture is beta-amyloid central appearancy beta-amyloid central appearancy beta-amyloid central appearancy beta-amyloid central environment in a constant of the several invention for the ananostucture, as beta-amyloid central amyloid core recog
                                                                                                                                                                                                                                                                                                                                                                                            Tubular of spherical nanostructure for e.g. use in obtaining information from nanoscale environment, is composed of peptides including aromatic or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
